Security Device Management

SILVERSKY

Next-gen network defence made simple and affordable

Digital initiatives, tele- and remote work, and distributed office locations are testing the bounds of traditional perimeter-based security.

While the data center still exists, it is no longer the nucleus of the organization's IT operations. Systems, applications, and information can reside anywhere – from the ground to the cloud to third-party services – and in distributed and hybrid networks. Users, too, are dispersed, and access these assets from any device and any location.

But as an organization extends its reach into new environments, it also extends its attack surface. Consistent protection is critical along the network edge.

SilverSky Security Device Management adds critical functionality that strengthens a company's defence of its users and digital assets in a modern, perimeterless world.

Everything a Traditional Firewall does – and more

- Edge Protection
- Unified Threat Management Capabilities
- Web & Content Filtering
- Anti-Virus, Anti-Malware
- Centralised Management
- Network Segmentation
- VPN
- SD-WAN
- Deep Packet Inspection

SilverSky Security Device Management

Extending threat detection to new environments

SilverSky Security Device Management is a network gatekeeper, but its role and supporting functionality have evolved to protect beyond traditional on-premise workloads and perimeters and address the security challenges along an organization's extended network edge.

In addition to traditional firewall port/protocol inspection and blocking techniques, SilverSky Security Device Management adds comprehensive application-level inspection, intrusion prevention, and intelligence from sources outside the firewall. SilverSky monitors the managed device and will react proactively to protect your assets against an attack while it is happening.

Every organization has unique requirements, and SilverSky offers a robust set of cutting-edge capabilities to cover the broad set of use cases needed for protection along the modern network edge.

We've got you covered

Managed Protection

We take on the burden and complexity of managing and monitoring your firewall. You focus on running your business – we'll focus on keeping you safe.
Affordable Peace-Of-Mind

Our managed model levels the playing field to deliver cost-effective security device management that scales to meet your changing needs.

On-Demand Access

All companies face risk. No matter what your company's size, we give you access to the latest enterprise- grade technology and the advanced expertise to run it.

SilverSky Security Device Management sets the standard for powerful edge security — delivered as a worry-free, cost-effective managed service.
